

FISHKIT

Information to protect your
resources and create a better
future

FishKit is a free suite of tools that helps coastal fishing communities assess fishery health and evaluate management actions — turning established fisheries science into simple, accessible tools that complement local knowledge.

SIX CONNECTED TOOLS FOR YOUR FISHERY

Stock Health Tracker

Gain insights into fishery health,
from fish being caught

Size Limit Builder

Test size limits that balance catch
with sustainability

Bag Limit Builder

Test bag limits against your
fishery's goals

Temporary Closures Tool

Model seasonal or time-based
closures before you set them

Spatial Management Guidance

Design protected areas that
rebuild fish populations

Data Repository

Store the life history, length and
catch data your analyses need

ASSESS • DESIGN • MONITOR

Together these tools help your community manage
fisheries — grounded in your own data and local
knowledge.
